SUMMARY

Data Engineer with experience building **Python, SQL data pipelines, cloud analytics workflows, and scalable processing solutions**. Skilled in **Azure, PostgreSQL, PySpark, MongoDB, CI/CD, automation, data quality, monitoring, and troubleshooting**.

TECHNICAL SKILLS

Programming & Data Engineering: Python, SQL, PySpark, R, JavaScript, Pandas, NumPy

Big Data & Workflow Tools: ETL/ELT Pipelines, Distributed Data Processing, Data Validation

Databases: PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, Relational Databases, NoSQL Concepts

Cloud Platforms: Microsoft Azure, AWS, Google Cloud Platform, Azure Data Services, Cloud Data Workflows

DevOps & Engineering Tools: Git, GitHub, CI/CD, Jira, Agile, API Integration, Streamlit

Analytics & Reporting: Tableau, Power BI, KPI Dashboards, Reporting Automation, Data Quality Monitoring

Core Strengths: Pipeline Optimization, Root Cause Analysis, Scalable Architecture, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Faculty Assistant – Data Science & Machine Learning (FADS)

Indiana University Bloomington

Jan 2026 | Present

Indiana, United States

- Built **Python and SQL-based data pipelines** integrating **satellite imagery, geospatial features**, and environmental datasets to support scalable analytics, automated validation, and downstream **data modeling workflows**.
- Designed **data quality checks, schema validation steps**, and **troubleshooting workflows** to improve **data integrity**, reduce inconsistencies, and support reliable **large-scale analytical processing**.
- Developed **modular data processing components** for **feature extraction**, transformation, and **model-ready dataset creation** using **cloud-based workflows** and **version-controlled engineering practices**.
- Supported **performance monitoring** and **workflow optimization** by identifying processing bottlenecks, debugging **pipeline failures**, documenting **pipeline logic**, and improving reliability across **multi-source data systems**.

Applied Data Scientist – Advanced Analytics

Intuz Software Company

Aug 2023 | Aug 2025

California, United States

- Built **Python and SQL-based data pipelines** integrating **satellite imagery, geospatial features**, and **environmental datasets** to support scalable analytics, automated validation, and downstream **data modeling workflows**.
- Designed **data quality checks, schema validation steps**, and **troubleshooting workflows** to improve **data integrity**, reduce inconsistencies, and support reliable **large-scale analytical processing**.
- Developed **modular data processing components** for **feature extraction**, transformation, and **model-ready dataset creation** using **cloud-based workflows** and **version-controlled engineering practices**.
- Supported **performance monitoring** and **workflow optimization** by identifying processing bottlenecks, debugging **pipeline failures**, **documenting pipeline logic**, and improving reliability across **multi-source data systems**.

PROJECT WORK

NikePulse – Nike Product Intelligence & Demand Analytics Platform

Product Analysis, Data Pipelines

- Built ETL pipelines integrating 50K+ retail records from sales, product, and review datasets, reducing manual analysis time by 60% and accelerating product performance reporting.
- Developed forecasting and analytics dashboards that surfaced emerging demand trends and sentiment shifts, enabling faster merchandising decisions across product categories.

E-commerce Customer Service Chatbot

Machine Learning, Artificial Intelligence

- Automated support workflows for 25K+ customer interactions, reducing response latency and improving operational efficiency through AI-powered query resolution.
- Delivered analytics dashboards that uncovered service bottlenecks and performance trends, contributing to a 15% increase in customer satisfaction scores.

Customer Churn Analysis & Retention Dashboard

Data Analytics, SQL, Power BI

- Analyzed 25K+ customer records using SQL-based analytics workflows to uncover churn drivers, high-risk customer segments, and retention opportunities, enabling targeted customer engagement strategies.
- Developed Power BI dashboards and automated KPI reporting for churn, satisfaction, and customer engagement metrics, improving stakeholder visibility into retention performance and supporting data-driven business decisions.

CERTIFICATION

AZ-900 Microsoft Azure Fundamentals

May 2026

EDUCATION

M.S. in Data Science | Indiana University | Bloomington, IN

May 2026

B.E. in Computer Engineering | Gujarat Technological University | Gujarat, India

June 2024
